Staying Current with AI Risk

What Changed and Why It Matters

Format	Duration	Audience	Deployment	LMS / SSO	PO
Live / Recorded	30-45 min	Board / Executives	Enterprise licensing	N/A	Supported

Executive Overview

Staying Current with AI Risk is a periodic executive briefing that keeps leaders informed about meaningful changes in AI risk, governance, oversight, and regulatory expectations. It filters out noise and focuses on what boards and executives need to understand to remain current and defensible.

Briefing Outcome

Provide leadership with a concise, structured update on material AI developments, why they matter, and what governance or oversight actions may be appropriate.

Why This Matters

AI risk evolves quickly across regulation, security, vendor practices, employee use, and public expectations. Executives need a reliable update cadence so oversight does not become stale, fragmented, or dependent on ad hoc news monitoring.

Enterprise Risk Exposure Addressed

- Leadership awareness that falls behind material AI risk or regulatory changes
- Governance practices that become outdated as AI use and expectations evolve
- Overload from too much AI news without clear business relevance
- Lack of documentation showing ongoing executive attention to AI risk

What the Organization Receives

- **AI Risk Update Briefing:** Concise executive briefing focused on material changes and business relevance.
- **What Changed Summary:** Plain-language summary of developments that affect governance, risk, security, compliance, or oversight.
- **Leadership Implications Notes:** Guidance on why the changes matter and what questions leaders should ask.
- **Oversight Continuity Checklist:** Support for maintaining an ongoing review cadence and documenting executive attention.
- **Action and Follow-Up Log:** Practical format for recording decisions, open questions, and next steps after each update.
